

GIT 337 Final Capstone Evidence

Student: Vincent Rosa · **Site:** Fillmore Jazz Years

1. Project and URLs

Project, audience, and purpose

Fillmore Jazz Years is a short public history site about the jazz scene in San Francisco's Fillmore District from the 1940s to the 1960s. It's for Bay Area residents, jazz fans, students, and families with ties to the neighborhood. It explains how the scene was built and cleared, gives a quick reference to the clubs, and lets readers request a guided tour past the former club sites.

Priority tasks

1. Read how the scene grew and how redevelopment cleared it.
2. Look up a club, where it stood, when it ran, and what it was known for.
3. Request a walking tour of the former club sites.

Pages

1. Home (`index.html`)
2. The Story (`story.html`)
3. The Clubs (`clubs.html`)
4. Walking Tour (`tour.html`)

Code defense

Capstone deliverable Code Defense Video

Recorded code defense and talked about two decisions: 1 moving `.feature-header` inside `main` so each page has one banner landmark; 2 refactoring the Module 5 nav onto the Fillmore tokens, including the brass ring on the dark header.

2. Concise Requirement Map

Requirement	Location	Purpose	Reuse decision
Semantic Structure and metadata	All pages: skip link, one banner header, labeled nav, main, one h1, unique title and meta description.	Landmarks and headings let readers and screen readers reach each priority task.	Adapt Module 5 page shell and Module 4 Story markup, .feature-header moves inside main.
Shared design system	styles.css: reset, tokens, type scale shared components.	Plum, brass, and cream tokens; PT serif with Georgia fallback; fluid type steps; one set of hover, focus, and active states.	Adapt Module 5 and 6 Arial and maroon/gold tokens
Navigation and layout	All pages: .site-header and navigation.js; .story-layout grid on story.html	Menu button, aria-current marker, every link visible without JavaScript; two-column story at 52rem.	Refactor Module 5 nav onto Fillmore tokens; breakpoint moved from 56em to 40em after retesting the four labels.
Figure	story.html, .feature-figure	1942 Dorothea Lange photo of Buchanan Street before the removal, with caption, credit, and archive link.	Adapting from Module 4
Data Table	clubs.html, .data-table	Club reference: location, years, and significance. Caption, scoped headers, and a focusable scroll region.	Refactored from Module 2 table patterns and adding new content to the Module 4 story.
Form	tour.html	Tour request with visible labels, help text, date, group-size, and time constraints	Refactored from Module 3 form.
SVG	story.html, .shape-record	Original decorative vinyl record beside the legacy section; hidden from screen readers because it carries no information.	Adapting from Module 4; fills move from inline attributes to CSS classes
Positioning and layering	.skip-link, .issue-badge, sticky .story-guide, .pull-quote, --layer-scale	Bounded spatial relationships only, each with a normal-flow fallback in the composition plan.	Adapting from Module 4
Shape or clip	clip-path ON .feature-figure img; shape-outside ON .shape-record	Torn poster edge on the photo; text follows the record's round edge. Both inside @supports.	Adapting from Module 4
Effect or motion	.action links on index.html, one per priority task	Lift, shadow, and arrow nudge on hover and focus mark the next step. Reduced motion	Adapted from Module 6 .action microinteraction from

Requirement	Location	Purpose	Reuse decision
		removes movement but keeps the shadow and underline cues.	the Fillmore Jazz Festival check-in
Testing	Evidence Sections 3–4	Release check and three findings, each with a repair and an exact retest.	Adapting condition, expected, observed, and repair format from the Module 5 and 6 test.
Documentation	capstone-evidence.html	Brief, map, findings, credits and an AI disclosure.	Adapting from Module 4 composition plan
Omitted work	Module 4 L1–L6 labels, PDF documentation section, and unused <code>feature.svg</code> and <code>portrait.svg</code> ; Module 3 F-labels and state specimens; Module 5 garden content.	Past scaffolding and unrelated topics would break the site experience.	Omitted.

3. Focused Release Check

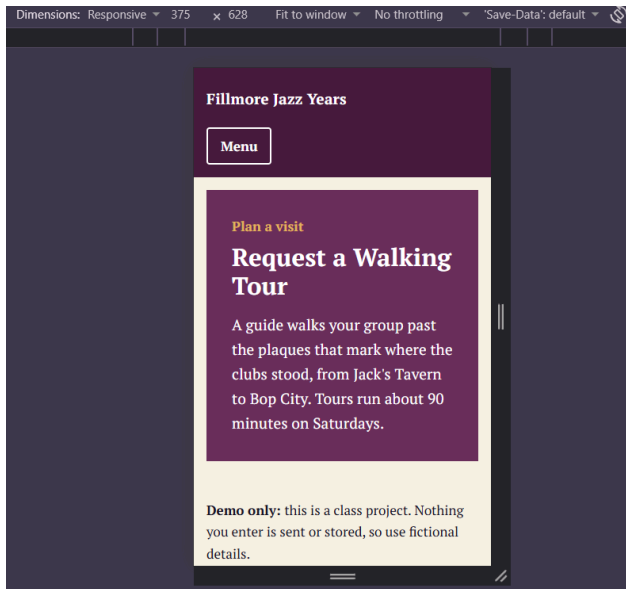

Tested on the published pages URL, all four pages, on 10/09/2026. Browser: Chrome 154.0.8037.98 & Firefox: 140.17.0esr (64-bit)

- HTML and CSS validation: All four pages pass the Nu Html Checker with 0 errors after one repair on Finding 3. `story.html` shows 1 warning, "Article lacks heading" the `h1` sits in the feature header. The CSS validator reports 3 errors, all `shape-outside` and `shape-margin` properties the CSS level 3 + SVG profile doesn't include. They're guarded by `@supports`, so this is a validator limit, not a defect.
- Published links and assets: Every nav, in-page, and external link opened the right page or section, and the DevTools Network panel showed no failed requests on any page.
- 320 CSS pixels and 200% zoom: All four pages reflow with no page level horizontal scroll at 320px and at 200% on a 1280px window. The header switches to the Menu button, the home cards stack, and the clubs table scrolls inside its own region. Nothin is clipped or overlapping.
- Keyboard and visible focus: Tab reaches the skip link first, then the brand, Menu, nav, story guide, table region, form fields, and task links in order. Enter and Space toggle Menu; Escape closes it and returns focus to the button. A focus ring was visible on every control (brass for the header and blue on the page).
- Form labels, constraints, errors, and recovery: Every field has a visible label, and required fields are marked. Submitting incomplete data added a red border and tint to each invalid field and kept the valid entries. Email showed "please include an @"; the date picker only enables Saturdays from Nov 7; group sizes 0 and 16 showed range messages. A valid submit reloads a blank form with no confirmation.
- Reduced motion and JavaScript unavailable: with `prefers-reduced-motion: reduce` emulated, the home buttons no longer lift or nudge but keep their shadow and underline. With JavaScript disabled at 375px, the Menu button stays hidden and all four links stay visible.
- Two current browsers: Repeated the 320px, keyboard, clip, shape, and SVG checks in Firefox. The menu, focus rings, photo, record colors, and text wrap matched Chrome. No differences found.

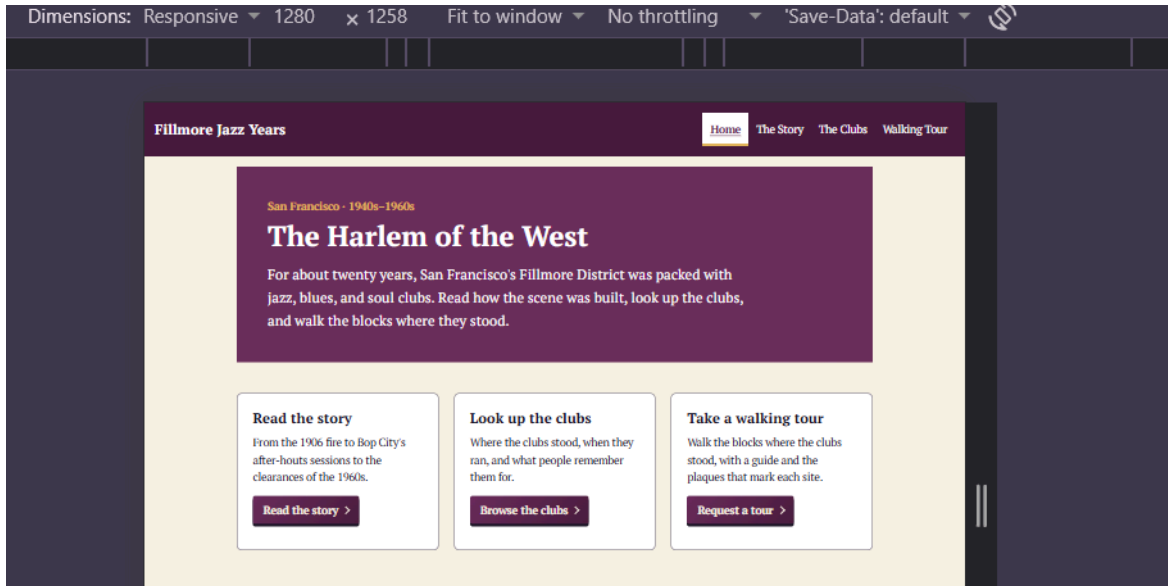

4. Three Findings and Repairs

Finding and condition	Impact	Repair	Exact retest and result
1. Menu never closes. At 375px on the live site, clicking the Menu toggled <code>aria-expanded</code> but the list stayed open.	Every page at narrow widths: the nav list always takes over the top of the page, and the button state doesn't match what's shown.	The CSS Checked <code>[data-enhance]</code> , but <code>navigation.js</code> sets <code>data-enhanced</code> . Realized that it was a typo in <code>styles.css</code> .	At 375px: the list starts closed, Menu open and closes it. Escape closes it with focus back on the Menu. Pass after repair.
2. Nav text disappears on hover. At 1280px, hovering the nav link turned its background white behind white text.	Mouse users lose the label of the link they're pointing at in the main navigation.	Hover background was <code>-color-on-action</code> which is (white) instead of <code>--color-action</code> Which is a (plum color)	Hovering each nav link at 1280px and Menu at 375px: now have a white underline text on a plum background color. Pass after repair.
3. Character limit not enforced. Ran the html validator on <code>tour.html</code> : <code>max-length</code> not allowed on <code>textarea</code> . As a result you could enter 300+ characters into Access needs and it was accepted.	The help text promised a 300 character limit but the form didn't enforce it, and the page ended up failing validation.	Renamed <code>max-length</code> to <code>maxlength</code> .	After repair html validator showed 0 errors. Was able to get stopped at 300 character limit. Pass after repair.

5. Screenshots

Finding 1 retest: at 375 px the nav list starts closed and Menu toggles it after fixing [data-enhanced].

Finding 2 retest: nav hover now shows white text on a plum colored background instead of white on white.

Access needs (optional)

The route is about a mile and a half on city sidewalks. Tell us about seating, pace, or other accessibility needs. Up to 300 characters.

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Aenean commodo ligula eget dolor. Aenean massa. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Donec quam felis, ultricies nec, pellentesque eu, pretium quis, sem. Nulla consequat massa quis enim. Donec.

Request tour

Finding 3 retest: after renaming max-length to maxLength, test stops at 300 characters, matching the help text.

6. Sources, Assets, and AI

MDN/official sources:

- [MDN: shape-outside](#) (record text wrap)
- [MDN: clip-path](#) (torn-edge photo)
- [MDN: @supports](#) (fallbacks for shape and clip)
- [MDN: position](#) (sticky story guide, absolute badge and skip link)
- [MDN: prefers-reduced-motion](#) (action link fallback)
- [MDN: aria-expanded](#) and [aria-current](#) (menu state and current page)
- [MDN: table](#) (caption and scoped headers)
- [MDN: input type="date"](#), [textarea](#), and [:user-invalid](#) (form constraints and error state)
- [W3C Nu HTML Checker](#) and [W3C CSS Validator](#) (release check)
- [KQED, The Fillmore](#) (story content and pull quote)

Assets and licenses:

- **Buchanan Street photograph, 1942.** Dorothea Lange for the War Relocation Authority. Source: [UC Berkeley Library Digital Collections](#). License: public domain (U.S. government work). Modification: none to the file; a CSS clip-path trims the corners on display, staying inside the print's mount border.
- **PT Serif typeface.** ParaType. Source: [Google Fonts](#). License: [SIL Open Font License 1.1](#). Modification: none.
- **Vinyl record SVG.** Original, created by me (Vincent Rosa) for this site. Colors come from the site's CSS tokens.
- **navigation.js.** My own Module 5 script, reused unchanged.

AI disclosure: No generative AI was used.
